

# Flowing Water

Southwestern Oregon Community College

Join instructor  
Tony Mason to  
photograph the  
scenic beauty of  
Oregon's coastal  
mountain streams  
and waterfalls at  
Golden and Silver  
Falls State Park &  
Sweet Creek,  
Siuslaw National  
Forest.

We may take the short hike to the top of Golden Falls. Bring some food (and water) with you as we may not be finished with the shoot until mid-afternoon.

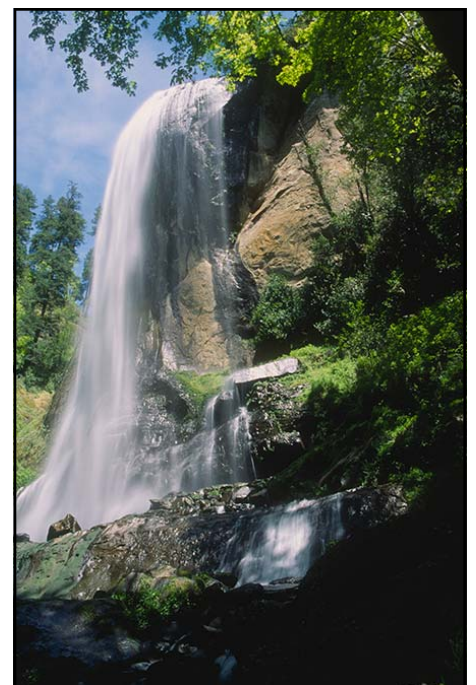

After we have shot and filled our memory cards, we will return to the campus and download our images. Now we not only have the chance to

During this imaging workshop, we will not only have the opportunity to photograph two of the best waterfall areas on the southern Oregon coast but we will also bring our images back to the campus to download them on the computer and use Adobe® Photoshop® (Adobe® Camera Raw and Adobe® Bridge®) to review.

## Basic Itinerary

An exact itinerary would be hard to produce as weather and other conditions influence opportunities, but the major workshop elements would be...

**Saturday:** We will meet on the SOCC campus (room to be announced) and discuss the day's activities (rain or shine). We will then travel to Golden and Silver Falls (approximately 30 miles east, from campus) and start to photograph the two falls and Glenn Creek.

Photographing Nature

see what we have captured, but just as importantly to see what we did not capture. Were you able to get the water to blur, or did you freeze it? Depth-of-field, how much? Can Photoshop® be used to enhance

able to get. We'll have lunch (either in the field or in Mapleton) and return to location for additional shooting in different lighting conditions before we return to our homes after a good day of photography.

**About the instructor:**

Tony has been instructing students at SOCC on how to use their cameras since 1985 and has recently expanded the courses to include "point-and-shoot" & DSLR digital cameras. Plus he conducts courses in the use of Adobe® Photoshop®. He is also currently a member of the Oregon Coast Photographers' Association and Superintendent of the Coos County Fair's Photography Department.

the images? How about stitching together a panorama?

This first day is essentially practice so when we head north to Sweet Creek, we will have a very good idea of what our cameras and computers (all under your direction of course) can do (or not do).

**Sunday:** As determined by the group on Saturday (exact time, meeting location, etc.), we will travel up the coast to Florence then east to Mapleton and then to Sweet Creek. Total (round-trip) mileage today will be approximately 125-170 miles. Once on location, we will photograph smaller falls (compared to Saturday) and the creek as it flows around and over rocks.

While a tripod is recommended for both days, if you have a pair of rubber boots today, you will find them useful for getting into the shallow water to get that shot that you may not otherwise be
